

FLICKET.

Outline:

Flicket's technology test can be as simple or complex as you would like but shouldn't take you more than 4 hours to complete.

Your task is to create a new ticketing page quickly, this at the very minimum, should be a web page that shows several events that a user can select an event from and then select how many tickets they would like and complete the order. The rest is up to you. Feel free to reach out to me with any questions you might have - jimmy@flicket.co.nz

The project should be submitted as a link to a private repo that provides clear instructions on downloading and running the ticketing application.

Criteria will be based on functionality over design.

Hint:

You can use any freely available packages to maximise your time.
